Adolescent Coping Scale
Second Edition (ACS-2)

Short Form
Name: Jan Sample
Date: 08/11/2012

The Adolescent Coping Scale Second Edition is a 20-item self-report inventory that is useful for considering issues surrounding coping and for facilitating the development of coping strategies. This report provides a graphical profile of an individual’s degree of usage of 20 coping strategies and an evaluation of their perceived helpfulness. It categorises these strategies into two distinct coping styles.

Coping can be defined as a set of cognitive and affective actions that arise in response to a particular concern. They represent an attempt to restore the balance or remove the turbulence for the individual. This may be done by solving the problem (that is, removing the concern) or accommodating the concern without bringing about a solution.

The Adolescent Coping Scale Second Edition assesses how individual adolescents cope with either overall concerns or a particular concern. This individual has responded on how they would cope with various concerns or problems.

Throughout this report, it is not the absolute score that matters, rather which coping strategies are used a lot, which are used a little and what needs to be changed.

Profile of Coping Styles

The adjusted scores graphed below are based on mean ratings of the items in that coping style.

<table>
<thead>
<tr>
<th>Productive Coping</th>
<th>Usage</th>
<th>Helpfulness</th>
</tr>
</thead>
<tbody>
<tr>
<td>Encompasses problem solving while attempting to remain physically active and socially connected</td>
<td>74</td>
<td>80</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Non-Productive Coping</th>
<th>Usage</th>
<th>Helpfulness</th>
</tr>
</thead>
<tbody>
<tr>
<td>Indicates the use of avoidance strategies generally associated with an inability to cope with stressors</td>
<td>57</td>
<td>43</td>
</tr>

<td>8 1 14 2</td>
<td>30</td>
</tr>
</tbody>
</table>

Item responses scale: 1 = Never; 2 = Seldom; 3 = Sometimes; 4 = Often; 5 = Very often

Note: The coping strategies Humour and Spirit do not relate significantly to either coping style.

Interpreting the Results

In interpreting the results of the Adolescents Coping Scale Second Edition, it is important to emphasise the self-regulatory nature of coping. Self-awareness is a precursor to self-regulation. The opportunity needs to be created for people to learn about themselves in order that these understandings can be readily translated into practice. A comprehensive picture of coping is valuable as it can be used to help people to understand their own coping behaviour and to make changes which they think are necessary.

Follow-up

In order to promote adolescents’ reflection and evaluation of their own coping style, they can be led through a discussion that focuses on a series of questions. This process may take the form of a whole-class discussion, small-group work, buzz sessions with pairs of students, or individual work. The following questions may be used to stimulate discussion:

1. What have you discovered about the way in which you cope with your concerns?
2. What strategies do you use very often?
3. What strategies do you use infrequently?
4. Would you like to make some changes to the way you cope?
5. What would you like to do more of?
6. What would you like to do less of?
7. What would you like to do differently?
8. Do you use some strategies very often even if they are not helpful? If so, why? How would you like to change that?
9. Do you use some strategies only sometimes even if they are helpful? If so, why? How would you like to change?
Coping Tips

1. Aim to increase your use of productive coping strategies. Productive coping strategies include: physical recreation, working hard and achieving, solving the problem, seeking professional help, seeking social support, social action, investing in close friends, focusing on the positive, accepting your best efforts and seeking relaxing diversions.

2. Decrease your use of non-productive coping strategies such as: keeping to yourself, wishful thinking, self blame, not coping, worrying, tension reduction, acting up and ignoring problems.

3. Use positive thinking: positive thoughts lead to positive feelings and hope.

4. Believe in your capacity to cope.

5. Avoid negative thinking by stopping, evaluating and reframing your thoughts.

6. Use assertive communication and problem-solving skills where appropriate.

7. Learn to manage conflict.

8. Ask others for help when you do not have the strategies to cope.

How to Think More Positively

Hundreds of thoughts run through our minds every day, explaining and judging events and situations. If your thoughts are mostly negative, then you will experience mostly negative feelings. Negative thinking can cause low self-esteem, frustration, anger, unhappiness, depression, poor health, poor performance and low motivation.

When something happens that you have negative feelings about:

1. Stop and listen to your self-talk – have awareness of your self-talk

   A good way to do this is to write down what happened, what your thoughts were and how you felt.

2. Evaluate your self-talk

   Make a list of why your self-talk might be true and why it might be false. Thinking of reasons why your thoughts might be false is hard at first. If it is too difficult, ask someone else who can give an objective perspective.

3. Reframe your self-talk so it is more truthful and less negative

   You don’t have to pretend not to be disappointed or hurt – that would be unnatural. The aim is to try to look at the most positive perspective and keep some hope in your thoughts. One negative event doesn’t make your whole future negative.

Avoiding Non-Productive Coping

Some coping strategies are generally not helpful in dealing with problems, as they are largely negative and avoid the problem. A person may rely on these strategies because of habit, they might not be aware the strategy is useless or harmful and they may not be aware of other strategies they could use. To avoid non-productive coping strategies:

1. Learn from your mistakes and work out how to do things differently next time

2. Engage in peaceful activities: fishing, walking, reading, taking a bath, etc.

3. Do more activities you enjoy: drawing, playing computer games or music, watching a movie, etc.

4. Make time for physical exercise: go for a run, go to the gym, hit a punching bag, dance to your favourite music, etc.
Getting along with Others

Communication is a part of everyday life. Sometimes it can be difficult to communicate with someone, particularly about something important. If you feel you can’t speak with someone about a problem, try talking about a less concerning issue and see how it goes. In time you may feel comfortable enough to discuss your problem, or you may decide to talk with someone else about it.

When you want to discuss something important, how you approach the conversation will impact how well it goes. You need to consider what you want to express (feelings and words) and you need to say it without denigrating others. Use assertive communication to communicate successfully.

Assertive communication is expressing yourself and your wants in an honest, respectful and direct way that does not put others down. To communicate assertively, use I messages, state a tangible situation, explain the effect and suggest a preferred outcome. For example, ‘When I’m shouted at, I feel embarrassed and bombarded. Could you please tell me in an ordinary voice what you’re upset about?’

Avoid aggressive and passive communication. Aggressive communicators stand up for their rights at the expense of others in a rude and overly powerful manner. They attack another person, rather than objecting to others’ behaviour or the situation. Passive communicators put others’ rights before their own, feel sorry for themselves and remain silent so that others do not know how they feel.

Coping with Conflict

Conflict arises from differences between people and a certain amount of conflict is normal. Each of us is an individual with our own needs and desires, which may clash with others’. Conflict in small amounts can be an opportunity for growth, if it leads to positive change. When conflict is ongoing or severe, our relationships suffer and it can lead to negative outcomes, such as aggression or depression. To cope with conflict:

1. Understand the needs and concerns of the other
2. Communicate your needs and concerns
3. Handle your emotions
4. Brainstorm creative options
5. Consider your alternatives

Asking for Help

Sometimes problems can seem too awful to talk about. They might seem too minor or trivial to discuss with others, or you might not be comfortable approaching someone else with a problem. There are various people to turn to when problems arise. Friends, parents and family members can be a great support. If the problem is something you feel embarrassed or guilty about – or if you don’t want to discuss it with family or friends – there is another option: professional help. Doctors, counsellors and psychologists are trained to assess situations and to help people better understand and manage their responses by developing effective coping strategies – no matter how big or small the issue.
